PreviousNext Thank you for your feedback! It has been submitted. Was this help page useful?Send feedback. Im excited to announce Sketchpad 4.0! The focuses on this release hasmaking the app more colorful, faster, and easier to use.Heres an overview of whats new:Stroke/Fill is available on all brushes.VectorFill replaces Floodfill forcrisper edges and much faster rendering!This can lead to some fun byimportingan SVG into Sketchpad, re-coloring it, and download itback as an SVG (right click to download!).Linear gradient editorRadial gradient editorText updates with special thanks to OpenType.js& some inspiration from FitText! Editing text now feelsvery smooth. Additionally these new features are available:Font Size is automatically set based on textarea dimensionsBold,Italic,Underline&StrokestylesAlignLeft, Center,Right&JustifyLine Height&Letter SpacingCrop has beenmerged with the Resize toolmaking life simpler. Whats better the crop tool nowautomatically zooms your viewport tofit so you can see your entire documents while cropping.Your library view has been updated with a more robust & spacious interface, along with more obvious buttons for renaming, duplicating, and removing documents.High-res export now works on all tool and style combinations!New auto-save Uallows you to disablethe auto-saving feature. This is helpful especially on large documents with thousands of layers that may take awhile to autosave. Although, to that end, auto-savings much faster in thenew version.And finally youll find anexport button right on the toolbar for all those who requested it!Special thanks to jsondiffpatch which is now used inSketchpads history.There are a couple things that could not be 100% converted to the new version Sketchpad. You may want to consider whether these matter to you before upgrading your files (you will be prompted).My apologies for any inconveniencethese may cause you:FloodFill was deprecated. It just did not make sense to keep in. It cost too much to maintain, it was notorious for crashing usersbrowsers. Sketchpad is a vector app, so a bitmap FloodFill never made sense. The new VectorFill replaces the FloodFill, and the results are much nicer!LinearGradient format needed to be upgraded in order support the newGradient Editor, in doing so LinearGradientsmay shift slightly.If for any reason youd like to use the older version of Sketchpad you can find it at its new permanent URL: better yet, check out the latest!
