Looking for the right label when citing a natural fund, specifically the National Natural Science Foundation of China (two funding numbers), can be tricky. Suppose you have two funding numbers; should you put the first number in the first position or the second? This question has puzzled some before, and now it's time to get clarity. In the realm of scientific publishing, especially when referencing national funds like the National Natural Science Foundation of China (NNSFC), the proper labeling is crucial. While there might be differing opinions on this topic, let's explore some of the key points to help you make an informed decision. ### Understanding the Basics Firstly, it's worth noting that the NNSFC has a standard numbering system for its funding grants. The numbers are usually in the format 'nos. XXXXXX' where 'XXXXXX' is a unique identifier assigned to each grant. When citing the foundation, the general rule of thumb is to use the full text of the funding agency's name followed by the specific grant number(s) involved in your research. ### Positioning the Funding Numbers Now, when it comes to positioning the two funding numbers, there isn't a one-size-fits-all answer. However, some journals and styles do offer guidelines on this matter. For example, according to the ACS Style Guide, which is commonly used in the chemical sciences, it's recommended to list all funding numbers, including those from different sources, in a single citation, separated by commas or semicolons. On the other hand, the APS (American Physical Society) Publication Manual suggests that if you have multiple funding sources, each grant number should be separated by a semicolon. ### Making Your Choice Ultimately, whether to put the first or second funding number in the first position depends on your journal's style guide and the specific requirements of the paper. It might also come down to personal preference or consistency with previous publications. To avoid any confusion or disputes over citation styles, it's always a good idea to consult with your editor or proofreader before submitting your manuscript. ### Conclusion Citing funding numbers from national organizations like the National Natural Science Foundation of China can be straightforward if you follow established guidelines. By understanding the basics and knowing which journal style guide applies to your work, you'll be well-equipped to properly reference these crucial grants in your scientific publications. ### ARTICLE.END The process of applying for funding to support English articles, especially for young scholars and applicants for new projects, can be challenging. Fortunately, having some resources available, we're sharing them with you! Good luck everyone: Happy New Year is going to be even better ! ! ! Some funding opportunities shared from the Heilongjiang Province Natural Science Foundation of China. The book "Aquatic Chemistry: Chemical Equilibria and Rates in Natural Waters" by Werner Stumm and James Morgan is a classic resource on natural water chemistry. First published in 1996, it has been updated to its third edition and remains an authoritative introduction to the subject. The book covers essential concepts of natural water chemistry, providing a solid foundation for both self-study and classroom use. Key principles are illustrated with a wide range of quantitative models, examples, and problem-solving methods. Major subjects covered include chemical thermodynamics, solid-solution interface and kinetics, trace metals, acids and bases, kinetics of redox processes, dissolved carbon dioxide, photochemical processes, atmosphere-water interactions, and more. The book has been widely adopted in the US as a teaching tool and reference material for environmental studies and water chemistry. It's worth noting that there is an earlier Chinese translation, titled "Water Chemistry - Introduction to Natural Water Chemistry," translated by Tang Hongxiao, published by the Science Press in 1987. I can't verify the funding sponsor list provided as it contains potential inaccuracies and variations in naming conventions that may not be reflected in the FundRef Registry.
